Art Unit: 3662

1. Claims 10-18 are objected to because the preambles of claims 10-18 do not match the preamble of claim 1. Appropriate correction is required.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this

Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-18 are rejected under 35 U.S.C. 102(b) as being anticipated by LeBlanc et al (Pat. No. 5,960,341) or Chambers (EP 0869373).

LeBlanc et al teach a method for validating detected code modulated signals transmitted by beacons of a positioning system and received by a receiver of the positioning system including performing measurements for the detected beacon signals, selecting at least one of the detected beacon signals as a calibration signal, determining at least one allowed range for results of measurements for detected beacon signals other than the calibration signal based on measurements for detected calibration signal and on an available reference position of the receiver, rejecting each detection of a beacon signal for which results of performed measurements are outside of an allowed range determined for the measurements. See col 6, line 63-col 7, line 18; col 31, line 5-line 14.
